INTRODUCTION

What is an API Endpoint? An API endpoint is a point at which an application program interface (API) -- the code that allows two software programs to communicate with each other -- connects with the software program. APIs send requests for information from a web application or web server and receive a response.

In other words, API endpoints are the specific digital locations where requests for information are sent by one program to retrieve the digital resource that exists there. Endpoints specify where APIs can access resources and help guarantee the proper functioning of the incorporated software.

This document intends to show how to connect and use Strata API as an interface where users can extract/insert raw data without any graphical user interface.

We need to provide the API with our Strata login details to access Strata data and retrieve an access token. Once we have the access token, this will act as an access code and authorise our API access.

Even though you may have access to more than one Strata (e.g. for different organisations), the API will allow access to each once you are authenticated. Connecting to each will issue a different access token, valid for seven days for security reasons.

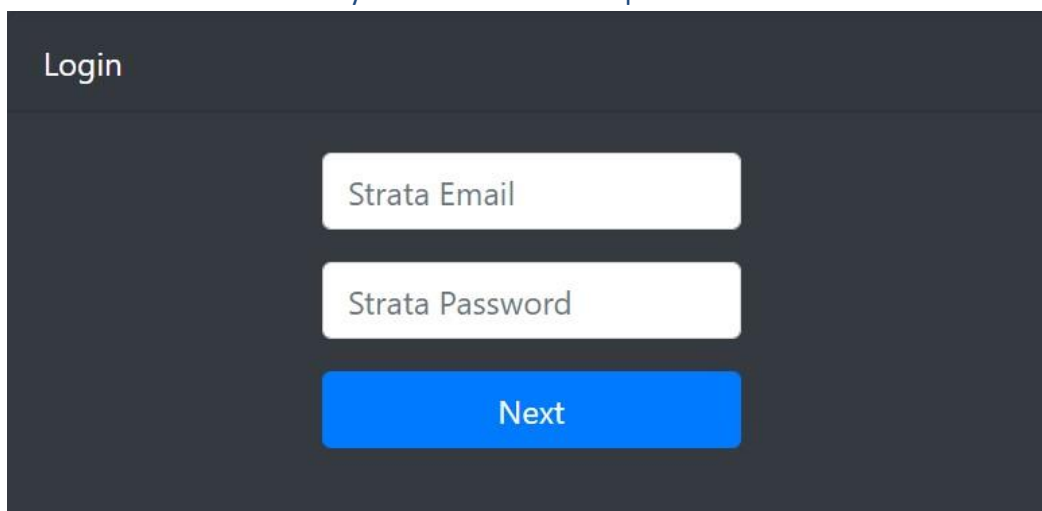

CONNECTING TO THE STRATA API

To start using the API and retrieve your access token, you have two options:

USER INTERFACE (Basic)

By using your web browser and going to <https://api.strata-login.com>

- Fill in the form with your Strata email and password.

A screenshot of a web form titled "Login" on a dark background. The form contains two white input fields: "Strata Email" and "Strata Password". Below these fields is a blue button labeled "Next".

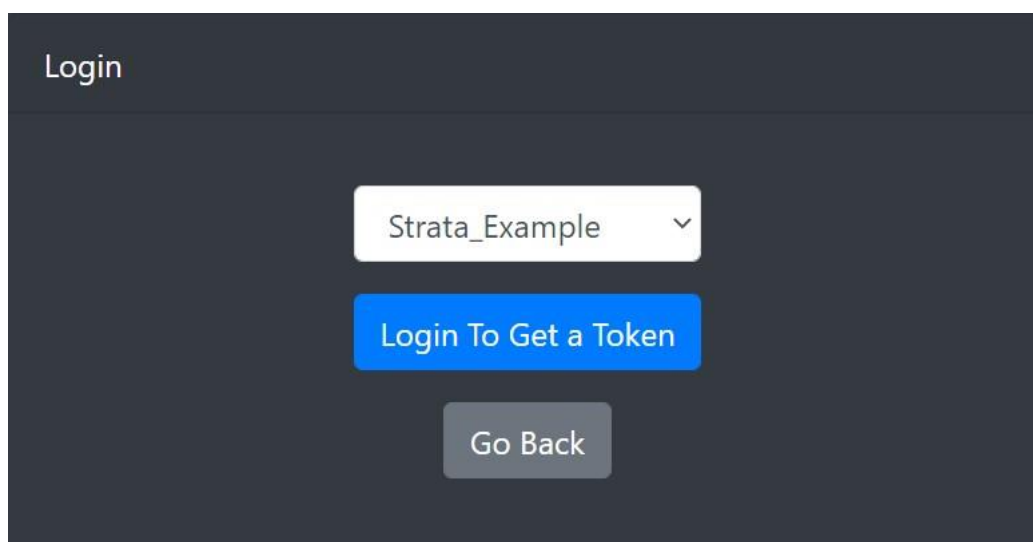

Login

Strata Email

Strata Password

Next

- Select the Strata you would like to access.

A screenshot of a web form titled "Login" on a dark background. The form contains a white dropdown menu with "Strata_Example" and a downward arrow. Below the dropdown is a blue button labeled "Login To Get a Token" and a grey button labeled "Go Back".

Login

Strata_Example

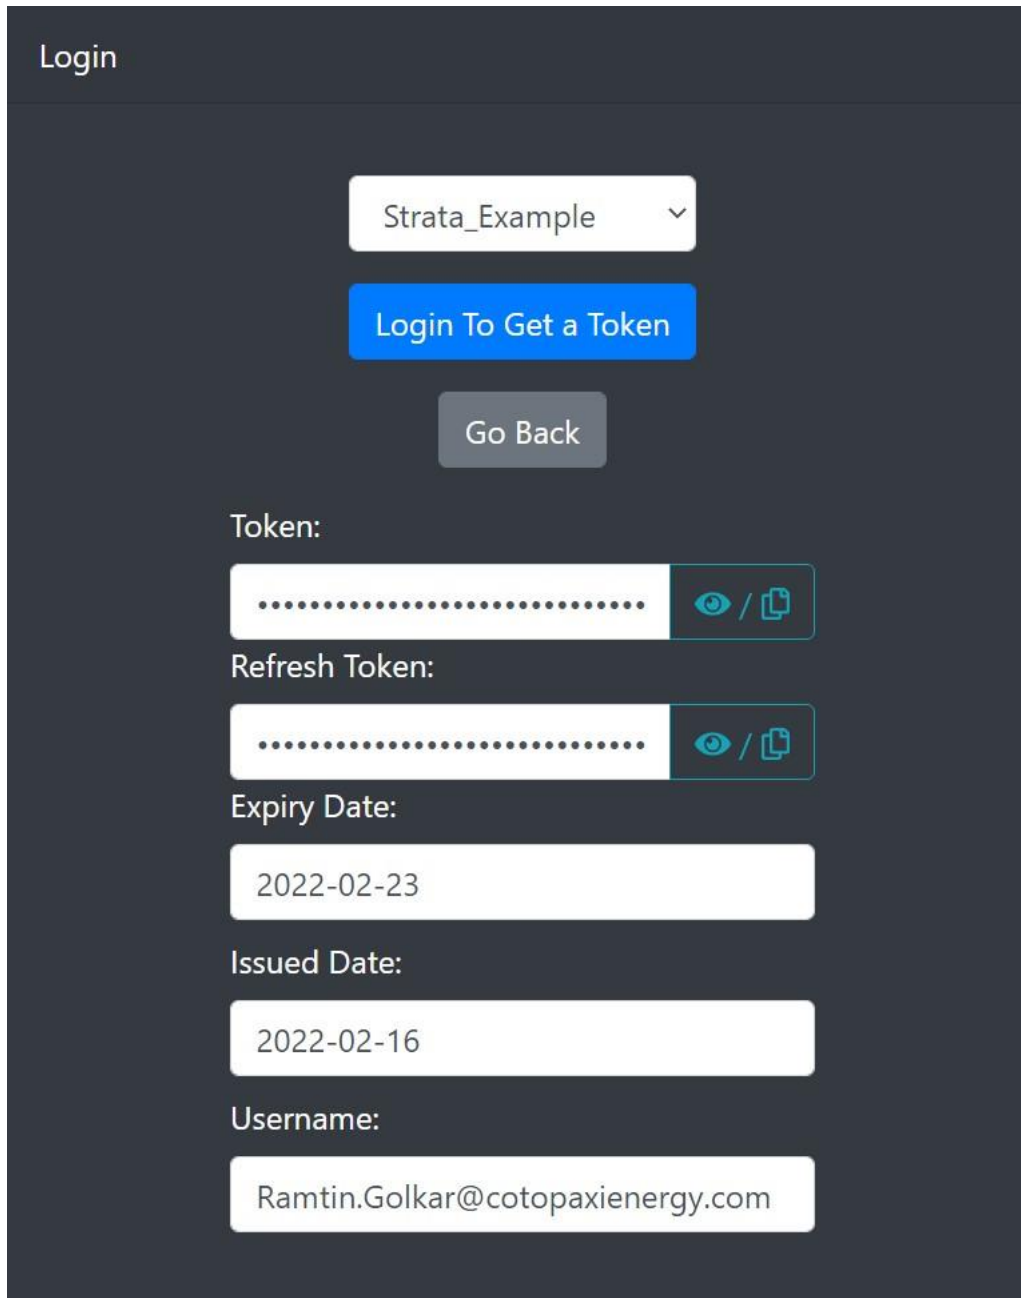

Login To Get a Token

Go Back

CONNECTING TO THE STRATA API

5

- Your access token and details will show like the form below.

The screenshot shows a 'Login' interface with a dark background. At the top, there is a dropdown menu showing 'Strata_Example' with a downward arrow. Below it is a blue button labeled 'Login To Get a Token' and a grey button labeled 'Go Back'. Further down, the 'Token:' label is followed by a text input field containing a masked token (dots) and a toggle icon (eye/copy). Below this is the 'Refresh Token:' label, followed by another masked text input field with a toggle icon. The 'Expiry Date:' is shown as '2022-02-23' in a text input field. The 'Issued Date:' is shown as '2022-02-16' in a text input field. Finally, the 'Username:' is shown as 'Ramtin.Golkar@cotopaxienergy.com' in a text input field.

- On this page, you can copy your token by clicking on the copy button by the token.
- Use this access token as the authorisation header for any request you are sending.
- The refresh token could be used to obtain a new token. Each refresh token is valid for 21 days, and upon using the refresh token, a new token and a new refresh token will be generated.

CONNECTING TO THE STRATA API

USING TOOLS LIKE POSTMAN (Advanced)

This will allow you to consume the API without using a user interface to get the access token.

If you need to see which Strata databases you have access to, send a POST request to:

<https://api.strata-login.com/api/Account/GetAccessibleDatabaseList>

as the image below with your Strata username and password.

KEY	VALUE	DESCRIPTION
<input checked="" type="checkbox"/> username	ramtin.golkar@cotopaxienergy.com	
<input checked="" type="checkbox"/> password	examplePassword	
Key	Value	Description

You can see in the response an array of objects called **“UserDBs”**, which will show accessible Strata.

When you know which Strata you want to connect, pass that to the below POST request with your username, password and strataDB:

KEY	VALUE	DESCRIPTION
<input checked="" type="checkbox"/> username	ramtin.golkar@cotopaxienergy.com	
<input checked="" type="checkbox"/> password	examplePassword	
<input checked="" type="checkbox"/> StrataDB	Strata_Example	
Key	Value	Description

The response will return your access token, which will be used to make requests and be valid for seven days.

You could avoid the first step if you already know which Strata you want to connect to, for example, Strata_(Replace Client Name).

CONNECTING TO THE STRATA API

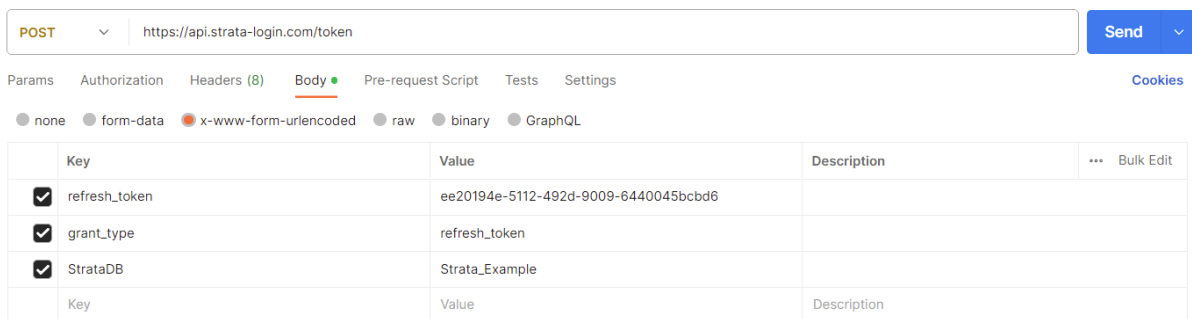

7

Refreshing the access token

Strata API can get new tokens by passing the refresh token obtained in the previous login step.

Each refresh token can be used once. As soon as you refresh your access token, a new refresh token will also be returned, which could be used to refresh the access token again.

You need to pass your refresh token in the body of the request like below:

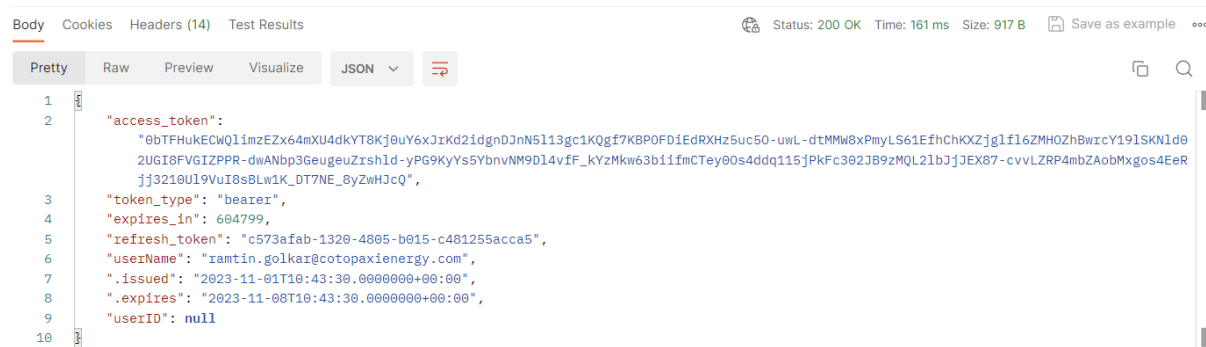

POST ▼ | https://api.strata-login.com/token | Send ▼

CONNECTING TO STRATA API WITH POWER BI

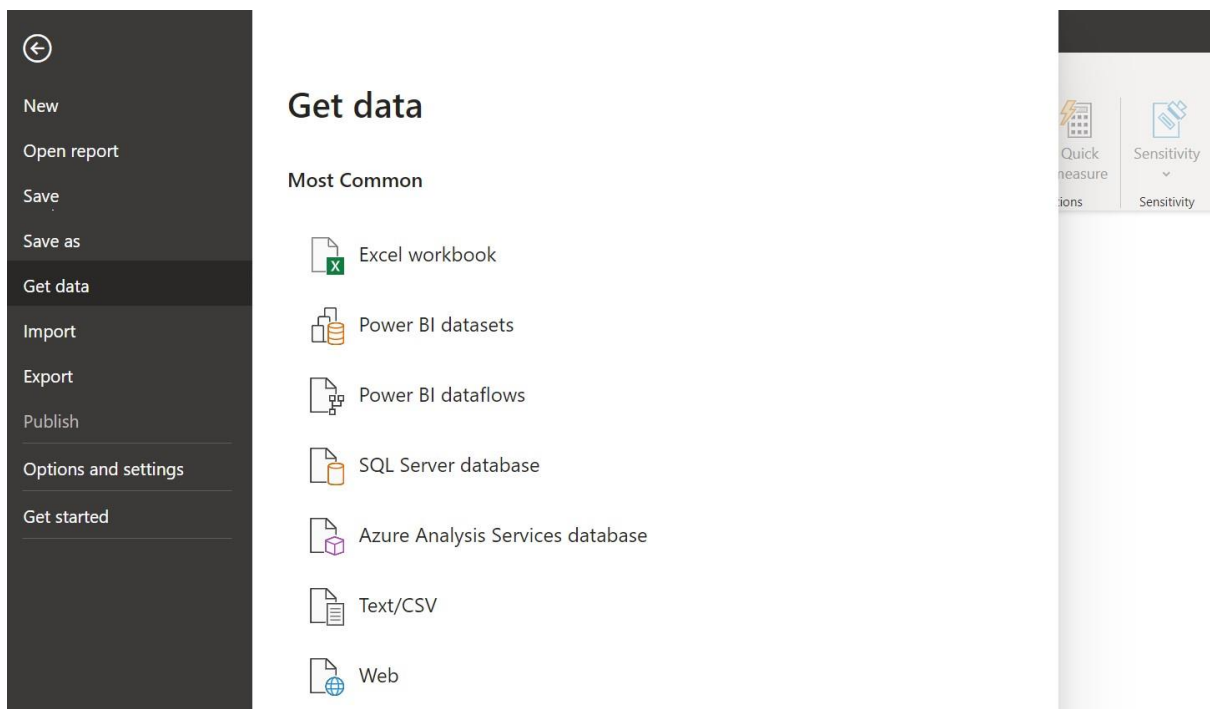

We can use Power BI to create custom visualised reports by extracting the data from the Strata API.

WIZARD

If you want to use the wizard option, follow the steps below.

Note: We offer packages for creating Power BI reports with Strata API. If you are interested, please get in touch with us at support@strata-login.com.

- From the “File” menu, select “Get Data”.

- In new versions, click on “Web” as shown in the screenshot above; otherwise, click on “Other” then select “Web”.

CONNECTING TO STRATA API WITH POWER BI

9

1. Select the “**Advanced**” option here and fill the form with the requested URL in the 1st box as shown below. The URL would be the endpoint you want to access; the most common URL is for getting data from a datafeed: [Click Here](#)

In the above example, put your desired DatafeedID after the equal sign, as in the picture below.

Tip: When you are viewing a data feed in Strata. The last part is your data feed ID. (in this example 16001)

 <https://example.strata-login.com/#/DataFeed/View/16001>

Type in a header called “**Authorization**” in the 2nd box. Then, in the 3rd box, type “**bearer**”, add one space after and paste your access token, which you obtained from the previous steps.

ADVANCED POWER BI SCRIPT EXAMPLE

11

USING ADVANCED QUERY

Here is an example: <https://api.strata-login.com/PowerBIQueryExample.txt>

Use this example to log in by providing your Strata credentials, retrieving the data from different data feeds, and combining those results. You could use the example to call other endpoints by simply following the same format as the example.

To use this, you need to go to **“File” => “Get Data” => “Blank Query”**, then from the left-hand side, right-click on the new query (usually called **“Query 1”**) and select **“Advanced Query”**, then paste the above example.

```
let
baseURL = "https://api.strata-login.com/api/",
body =
[
    Username = "Replace Strata Username",
    Password = "Replace Strata Password",
    StrataDB = "Strata_ClientName"
],

login =Json.Document(Web.Contents(baseURL&"account/login",[Content = Text.ToBinary(Uri.BuildQueryString(body)),Headers = [{"Content-Type":"application/x-www-form-urlencoded"}])),
Access_token = login[Access_token],

//startdate set to 7 days ago and end date is current date
startDate = DateTime.ToText(Date.AddDays(DateTime.LocalNow(),-7), "yyyy-MM-dd"),
endDate = DateTime.ToText(DateTime.LocalNow(), "yyyy-MM-dd"),

//Add as many Source as you need (e.g: source1,2,3,4,5) and just change the DatafeedID like below example -- Aggregation is now weekly 604800 seconds = 1 week
Source1 = Json.Document(Web.Contents("https://api.strata-login.com/api/Strata/GetDataTrend?DataFeedID=[DataFeedID]&startDate=[startDate]&endDate=[endDate]&AggregationLevel=604800&AggregationType=1", [Headers=[authorization="bearer "&Access_token]])),
Source2 = Json.Document(Web.Contents("https://api.strata-login.com/api/Strata/GetDataTrend?DataFeedID=[DataFeedID]&startDate=[startDate]&endDate=[endDate]&AggregationLevel=604800&AggregationType=1", [Headers=[authorization="bearer "&Access_token]])),

//this will combine the result if you need
output = List.Combine({Source1,Source2}),
output1 = output{0}

in
output1
```

EXAMPLE OF USING AN ENDPOINT WITH AN ACCESS TOKEN

12

Endpoint example: `https://api.strata-login.com/api/Strata/GetDataTrend`

- Go to the “**Authorization**” tab, select ‘bearer token’ and paste the obtained token.

The screenshot shows the 'Authorization' tab of a REST client. The 'Type' is set to 'Bearer Token'. A warning message states: 'Heads up! These parameters hold sensitive data. To keep this data secure while working in a collaborative environment, we recommend using variables. [Learn more about variables](#)'. The 'Token' field contains the value: 'QCihkaEvzflVe0fUYO00Mk2z67WJ1PoZCW...'.

- Go to the “**Params**” tab and add your parameters; in this case, the data feed ID, start and end date are below.

The screenshot shows the 'Params' tab of a REST client. The 'Query Params' section contains the following table:

	KEY	VALUE	DESCRIPTION	...	Bulk Edit
<input checked="" type="checkbox"/>	DataFeedID	4034			
<input checked="" type="checkbox"/>	StartDate	2021-01-01			
<input checked="" type="checkbox"/>	EndDate	2021-12-01			
	Key	Value	Description		

EXAMPLE OF INSERTING DATA INTO STRATA WITH AN ACCESS TOKEN

13

Endpoint example: <https://api.strata-login.com/api/Strata/InsertDataFeedReading>

- Go to the “Authorization” tab, select “bearer token”, and paste the obtained token from the previous steps.

The screenshot shows the Strata API client interface. At the top, the method is set to GET and the URL is `https://api.strata-login.com/api/Strata/GetDataTrend?DataFeedID=4034&StartDate=2021-01-01&EndDate=2021-12-01`. Below the URL bar, there are tabs for Params, Authorization, Headers (7), Body, Pre-request Script, Tests, and Settings. The Authorization tab is selected. On the left, under 'Type', 'Bearer Token' is chosen. A note states: 'The authorization header will be automatically generated when you send the request. Learn more about authorization'. On the right, a warning box says: 'Heads up! These parameters hold sensitive data. To keep this data secure while working in a collaborative environment, we recommend using variables. Learn more about variables'. Below the warning, the 'Token' field contains the value `QC1hkaEvzfLveOfUYO00Mk2z67WJ1PoZCW...`.

- Change your method to “POST” and go to the “Body” tab and send your readings like below:

The screenshot shows the Strata API client interface with the method changed to POST and the URL set to `https://api.strata-login.com/api/Strata/InsertDataFeedReading`. The Body tab is selected. Below the tabs, the content type is set to 'raw'. The body of the request is a JSON object:

```
1 {
2   "DataReadingList": [
3     {
4       "ReadingDate": "2020-03-25 15:45:40",
5       "Reading": 5500.522
6     },
7     {
8       "ReadingDate": "2020-03-25 15:46:50",
9       "Reading": 7000.10
10    }
11  ],
12  "PKDataFeedID": 1622
13 }
```

ALL AVAILABLE ENDPOINTS AND DOCUMENTATION

- To see all the available Strata API endpoints and their documentation, please [Click here](#).
